OEM Division: Custom Innovations

The Original Equipment Manufacturing division of Dakota Fluid Power, brings years of experience in hydraulic and electrical system engineering and manufacturing along with a commitment to customer satisfaction. OEM specializes in both the on/off highway vehicle and industrial sectors that encompass the following markets: Agriculture, Aggregate/Mining, Commercial Delivery, Construction and Processing Industries. DFP OEM pairs innovative custom products and services with our unique team of System Integrators, Software Developers and System Engineers to offer you a single source for the specific demands and requirements of your automation application.

WE ASK THE RIGHT QUESTIONS:

- How can we help?
- Why does a component need to be replaced/repaired or why did the unit fail?

It is our job to focus on the root of the cause to determine the best solution. We won't just give you a bandage for the problem; we want to come up with a long term solution. We will look at the system as a whole and determine what needs repair, while also identifying any alternative that may improve functionality or efficiency.
